

The Frasca Mentor

FAA approved Training for advanced avionics. The Mentor is a device capable of training pilots to fly integrated avionics systems such as the G1000 without investing in more complex Flight Training Devices (FTDs). While compact in size, the Mentor is a high quality simulator with an extensive features list and uses much of the same technology as our FAA approved FTDs and Full Flight Simulators.

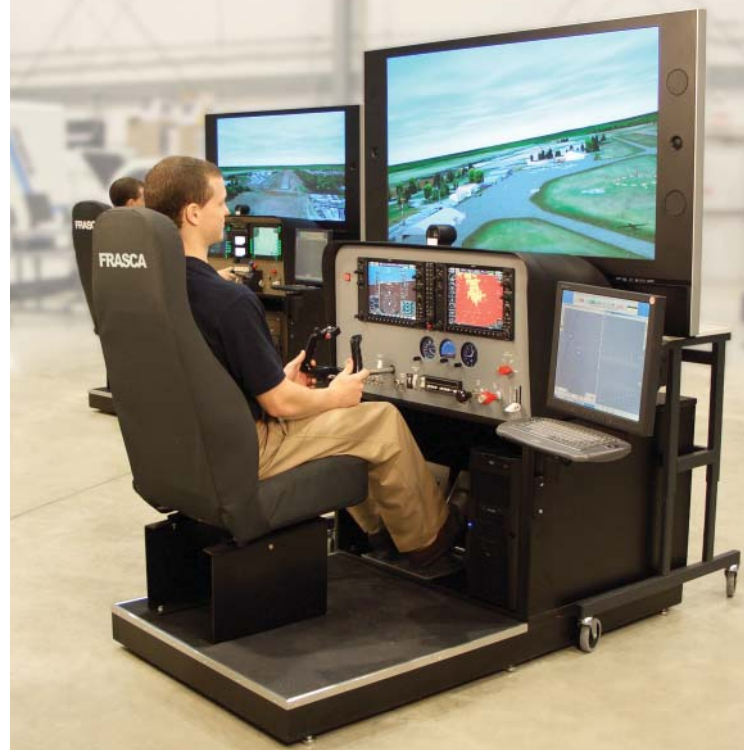

The Mentor is an ideal choice for flight schools who want to either supplement their existing fleet of simulators or as a first time investment into simulation.

Backed by 50 years of simulation experience, the Mentor was designed specifically to allow training in aircraft equipped with advanced avionics in order to meet the changing needs of flight schools worldwide.

Features and Options:

-  FAA approved Advanced Aviation Training Device (AATD)
-  FAA approved flight data package
-  Jeppeson Nav data
-  Full size flight controls including rubber pedals and toe brakes
-  Conventional instrumentation, Garmin G1000 or Avidyne Flightmax Entegra advanced instrumentation
-  Graphical Instructor Station (GIST)
-  Multi-channel sound simulation
-  TruVision Visual System
-  New lower price point
